

Speech Enhancement

Removes noise and distortions to restore clean, intelligible speech.

Music Separation

Separates vocals, accompaniment, or instruments for editing and remixing.

Instruct TTS

Generates speech from instructions describing voice, emotion, and style.

Speech Separation

Separates overlapping speakers into clear, individual speech tracks.

Emotion Editing

Changes emotion while preserving the speaker and spoken content.

Timbre Editing

Changes vocal tone while preserving the original spoken content.

De-accent

Reduces accents while preserving speaker identity, prosody, and content.

Nonverbal Editing

Edits laughter, coughing, crying, breathing, and other vocal events.

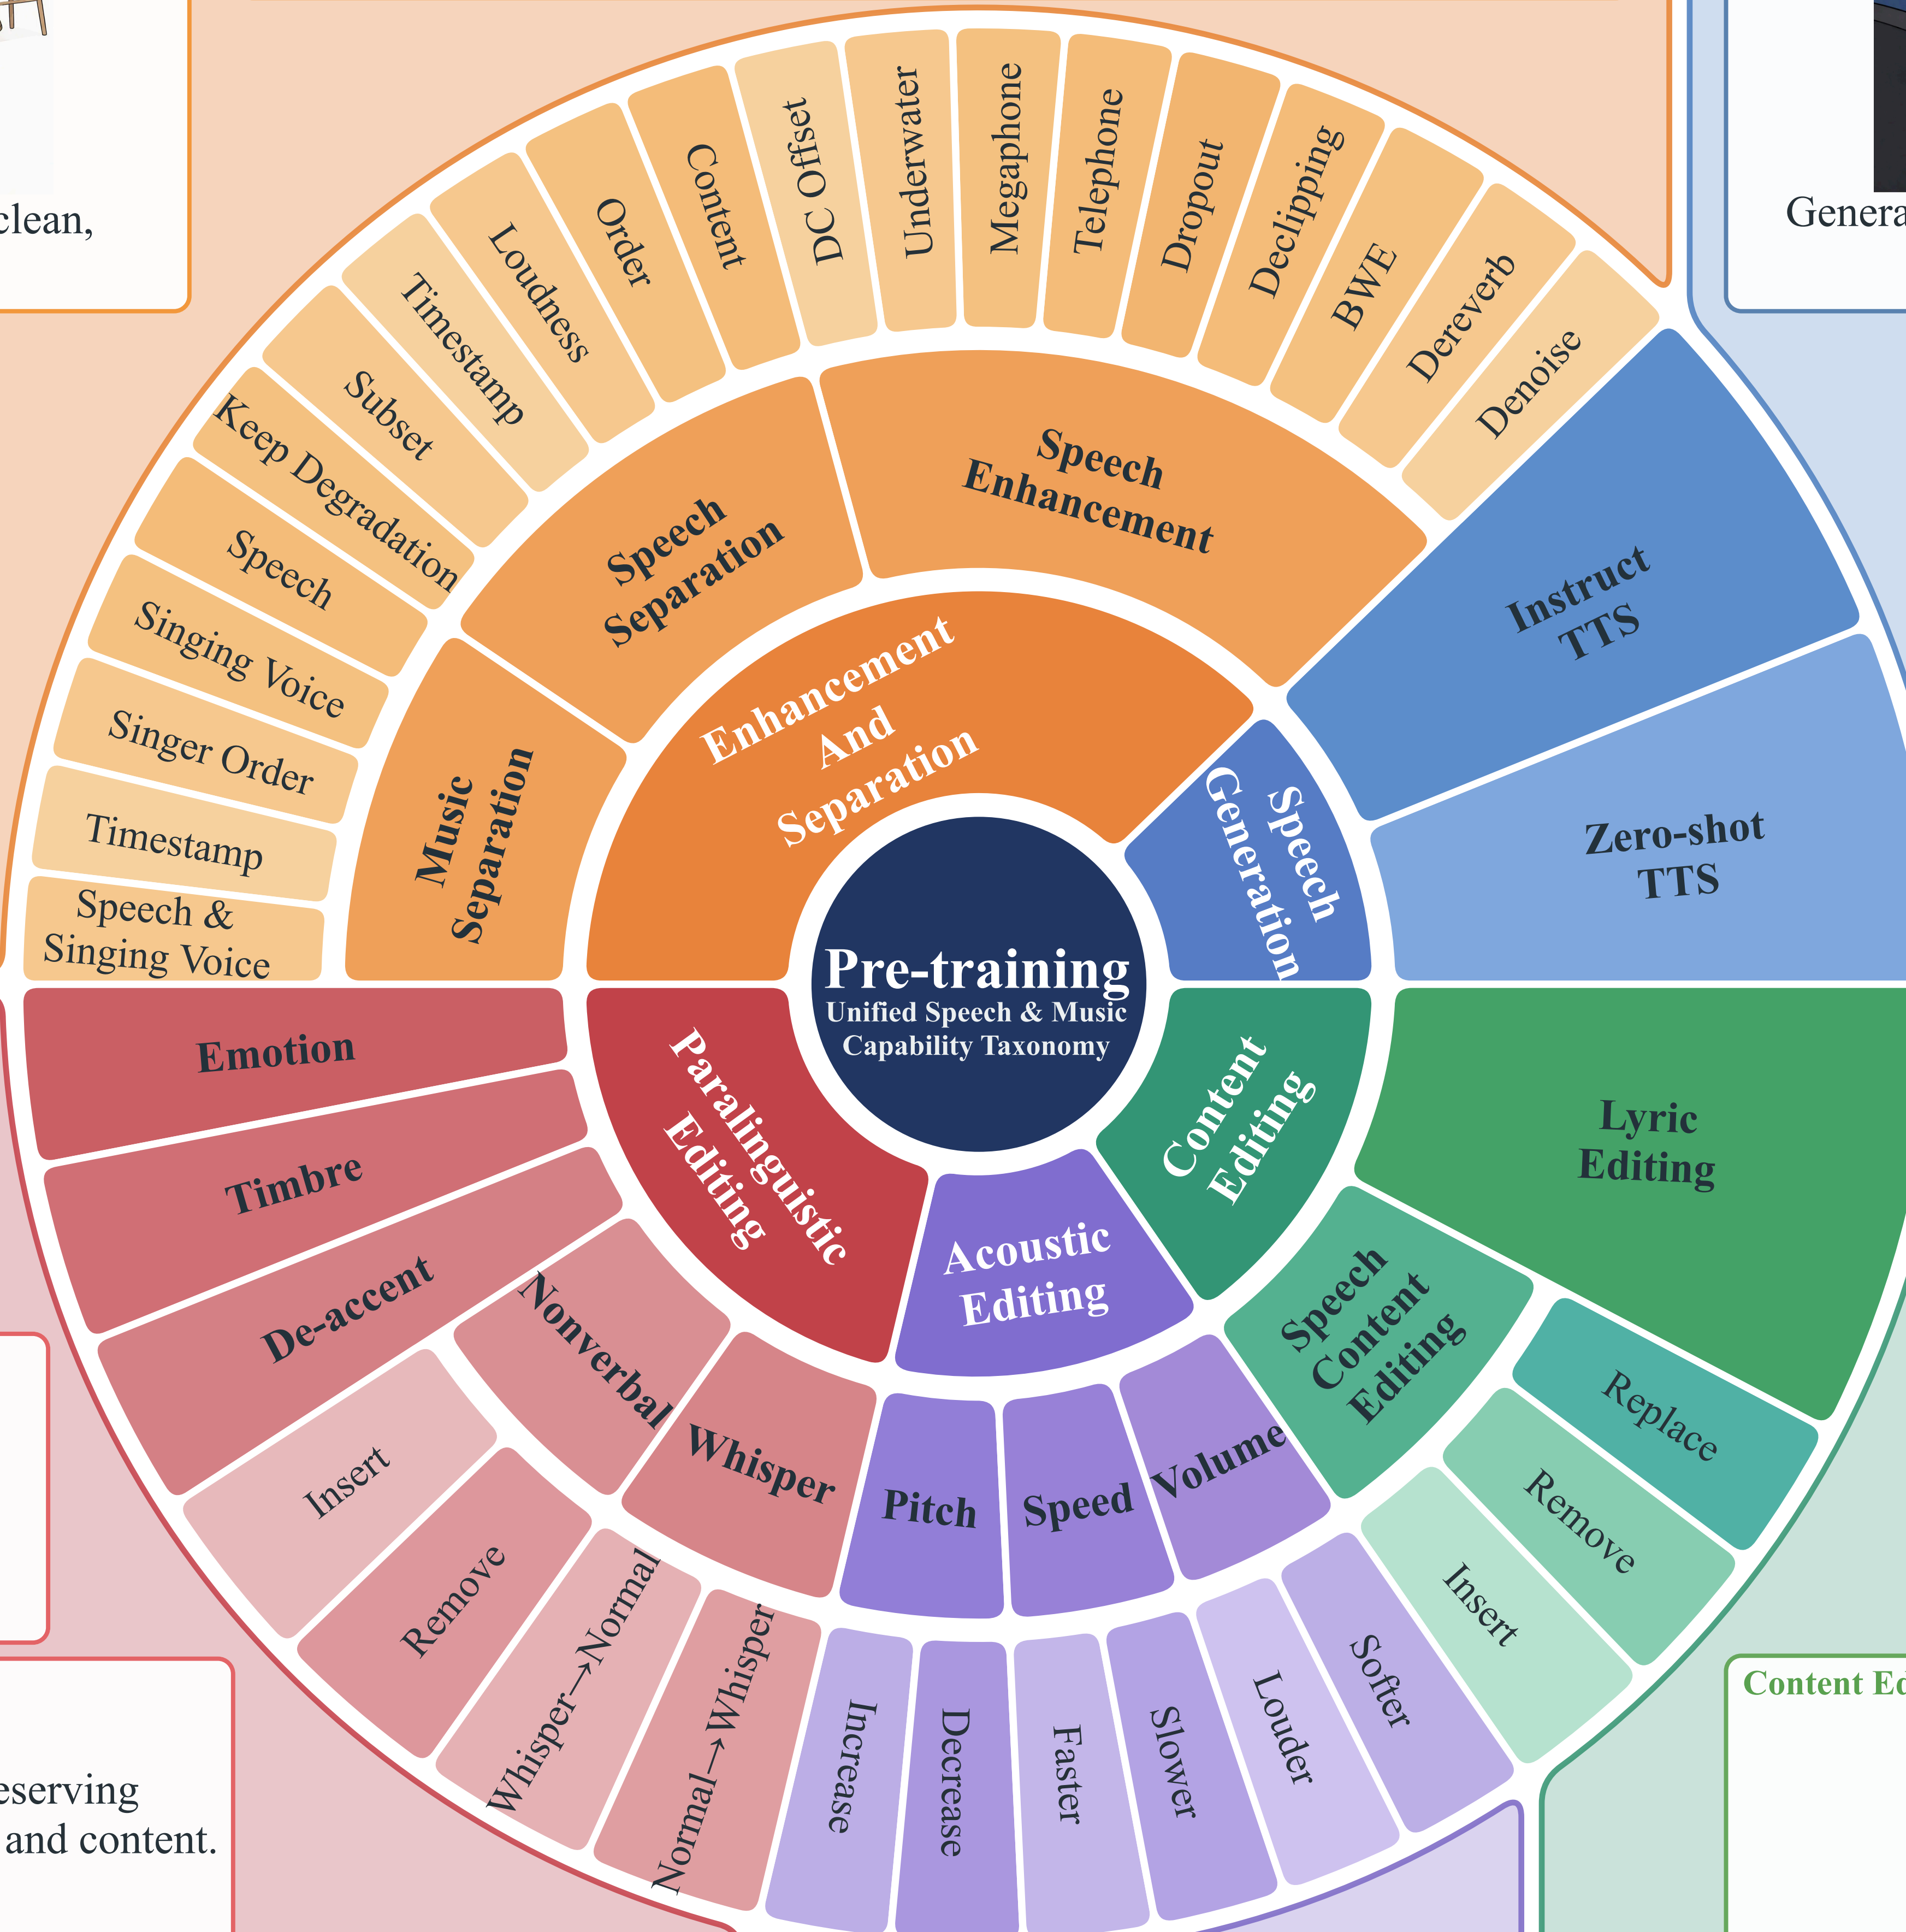

Whisper Conversion

Converts between normal and whispered speech while preserving content.

Pitch/Speed/Volume Editing

Adjusts pitch, speed, or volume while preserving speech content.

Zero-shot TTS

Generates new speech from a short reference voice recording.

Lyric Editing

Edits sung words while preserving singer, melody, and rhythm.

Content Editing

Inserts, Removes, or replaces words while preserving the original voice.
